

IT ALL STARTED WITH A SIMPLE REQUEST

Jim Grayson, PhD, Professor

Cole Phillips

David Newton

Anna Ramanathan

Patrick Hatch

Augusta University

Georgia's second-oldest and second-largest city, Augusta, is situated on the southern banks of the storied Savannah River.

JMP Discovery 2019

AUGUSTA UNIVERSITY

Offering undergraduate programs in the liberal arts and sciences, business and education as well as a full range of graduate programs and hands-on clinical research opportunities, Augusta University is Georgia's innovation center for education and health care.

The combination of nationally ranked business and nursing schools as well as the state's flagship public medical school and only dental school makes Augusta University a destination of choice for the students of today and the leaders of tomorrow.

*Our
goal
for this
presentation*

Describe our analytics process for a successful project and how our use of JMP greatly enhanced our ability to meet the needs of our clients

A tale of two models

The first model we thought the customer wanted
and the second model the customer actually needed

*It all
started at a
meeting to
update our
college
strategic
plan ...*

One of our committee members turned to me and said, “Do you have any students that might be able to help me with an analytics problem?”

Maybe??

Can you give me more detail on what you want to do?

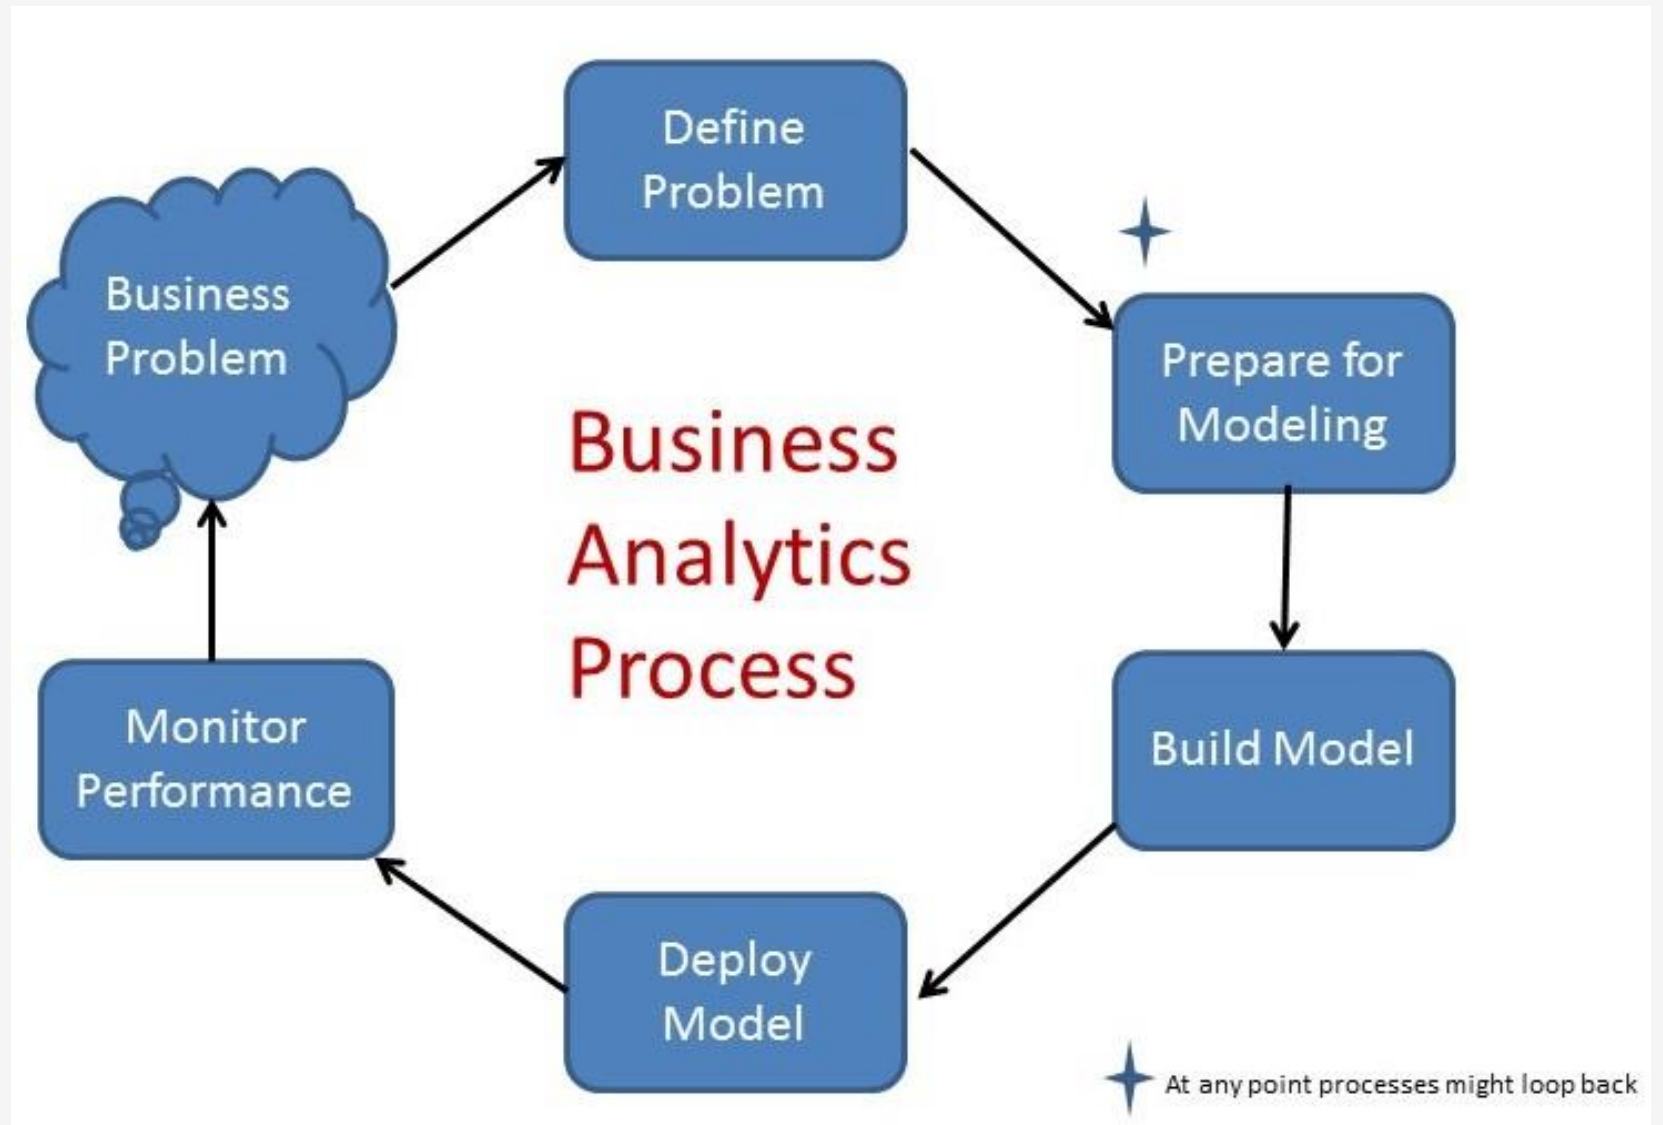

*We want to
improve the
no show
rate in our
medical
clinic*

Our current no show is 16.6%

Our goal is to reduce the no show to 12%

Can you help?

Analytics Process

Segmentation

Insights

Intervention

Research Study

Modeling Approach

- Use **Decision Trees** to communicate with our “customers”
- Use **Profiler** to explain the model
- Use **Column Contributions** to explain “drivers”
- Use **Leaf Report** to show relative **response probability** and **response counts**

*We were not
getting the
results we
had hoped
for*

Our first big breakthrough:

Segment the data by type of visit

- Hospital Discharge Visit
- New Patient Visit
- Annual Visit
- Return Visit
- Same Day Visit
- Other

*Our second
breakthrough
was to identify
the most
influential
visit types*

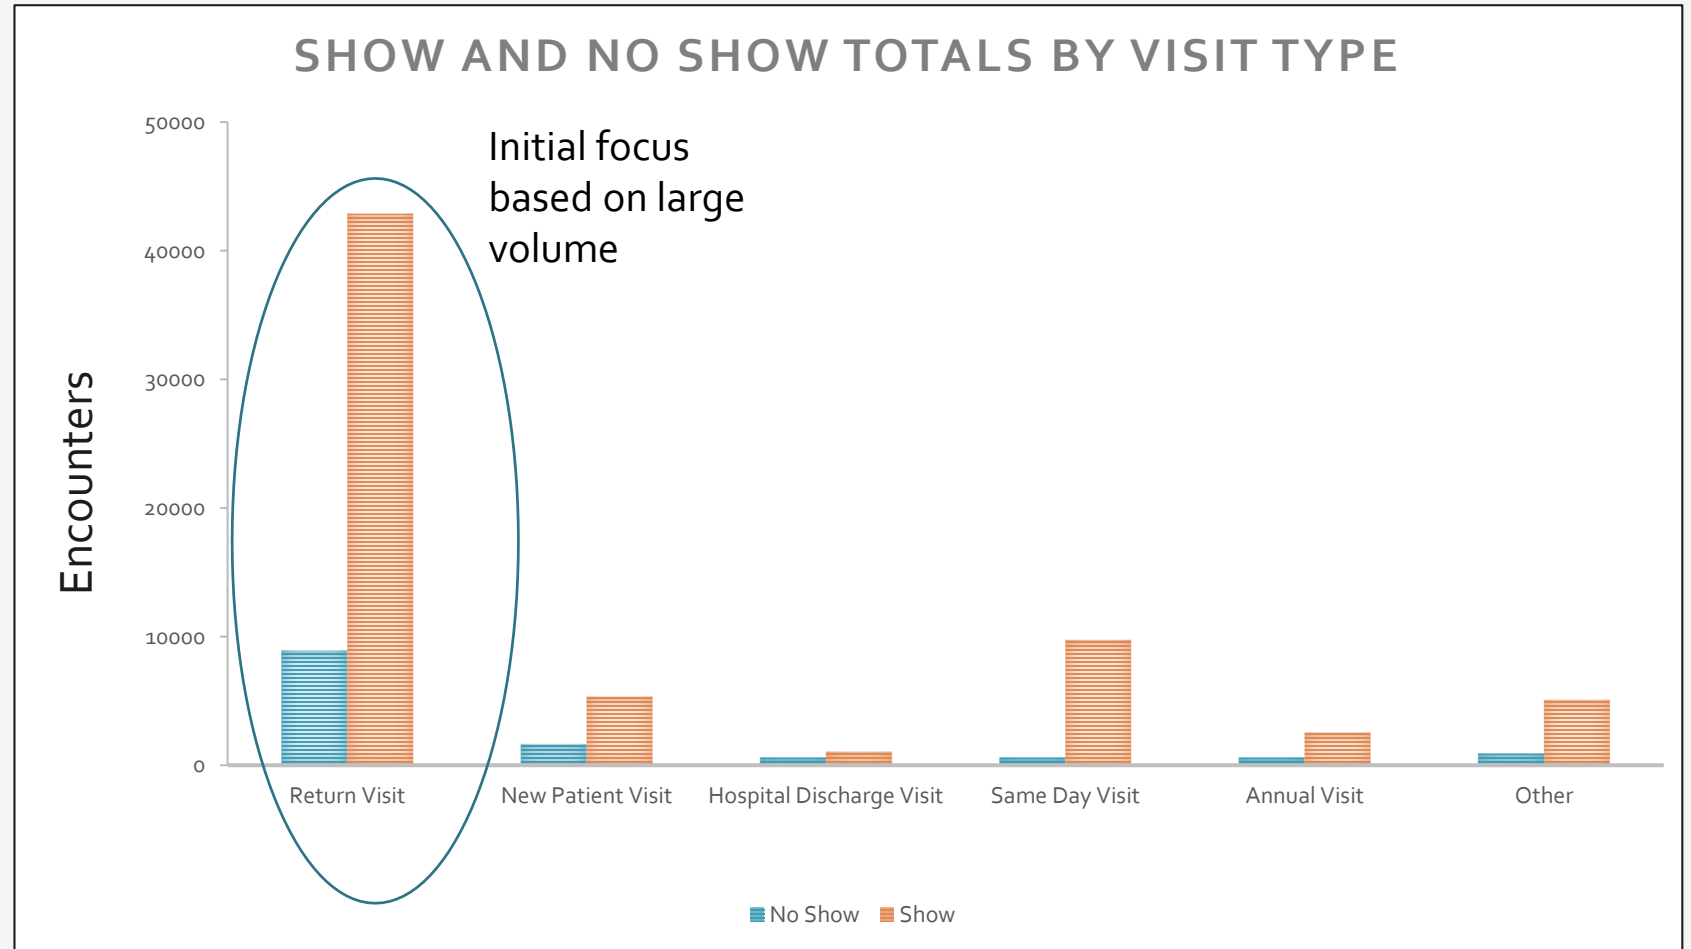

We get “most bang for the buck” with:

- Return Visits
- New Patient Visits
- Hospital Charge Visits

*Third
breakthrough
was to first
focus on:*

*Then there
was one*

Return Visits

Leaf Report

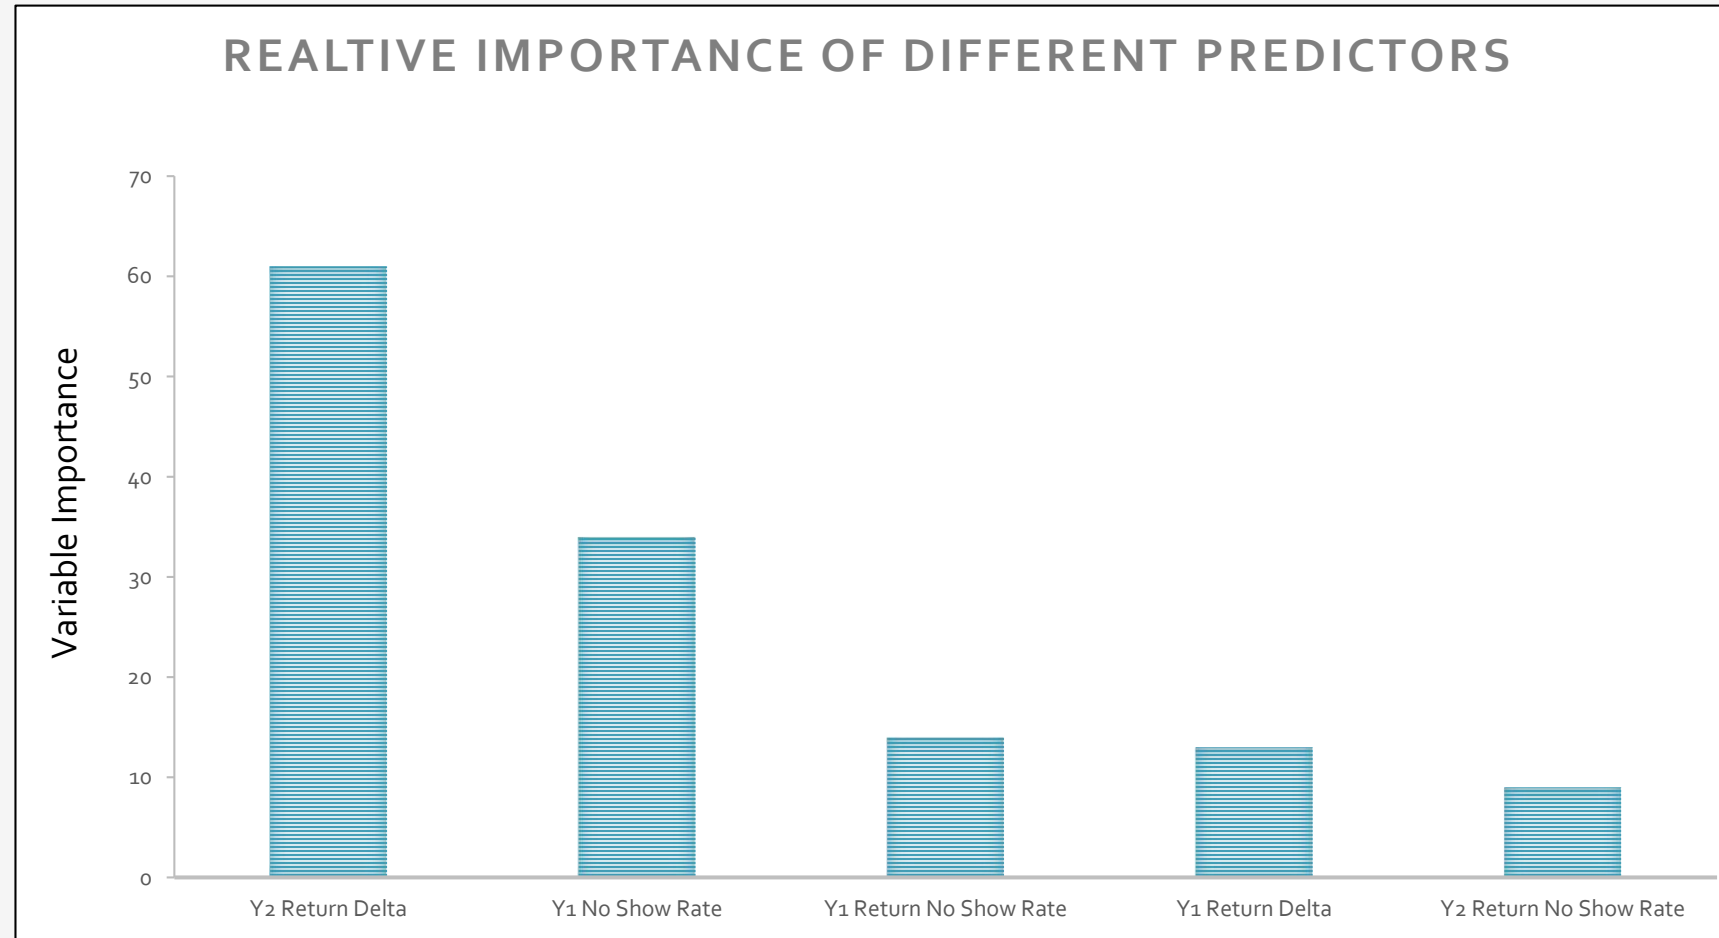

Response Prob

Leaf Label	A	N
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr -...	0.1459	0.8541
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr -...	0.3527	0.6473
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr -...	0.5728	0.4272
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr -...	0.5999	0.4001
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr -...	0.6392	0.3608
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr -...	0.7851	0.2149
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr -...	0.8915	0.1085

Yr 1 Percent No Show <0.1875 not Missing&Yr2 Arr -...	0.8619	0.1381
Yr 1 Percent No Show <0.1875 not Missing&Yr2 Arr -...	0.9334	0.0666
Yr 1 Percent No Show <0.1875 not Missing&Yr2 Arr -...	0.9711	0.0289

Response Counts

Leaf Label	A	N
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr ...	127	747
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr ...	424	779
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr ...	469	350
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr ...	1872	1249
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr ...	958	541
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr ...	2134	584
Yr 1 Percent No Show >=0.1875 or Missing&Yr2 Arr ...	2548	310
Yr 1 Percent No Show <0.1875 not Missing&Yr2 Arr ...	446	289
Yr 1 Percent No Show <0.1875 not Missing&Yr2 Arr ...	3370	540
Yr 1 Percent No Show <0.1875 not Missing&Yr2 Arr ...	6122	437
Yr 1 Percent No Show <0.1875 not Missing&Yr2 Arr ...	11190	333

The Fourth Breakthrough was that Past Performance is most predictive of No Show

*No Show Rate: Percentage of visits patient didn't show up to appt.

*No Show Delta: Value of missed appts. in relation to made appts.

Predictability Meets Practicality

4% of patients account for 24% of No Shows in Y1

Predictability Meets Practicality

5% of patients account for 30% of No Shows in Y2

YEAR 2 OVERALL NO SHOW PATIENT COHORT

*But don't
forget the
Health care
impact of no
shows*

- Patients who No Show are at risk of:^{1,2}
 - Poorly controlled disease states, especially in diabetes and high blood pressure
 - Not being up to date on preventative services and vaccines
 - Higher quantity of visits to the emergency department and inpatient admissions to the hospital
- Clinic suffers from patient No Shows³
 - Lack of continuity of care and disrupted flow
 - Empty slots take up appointment time that could have been used to see another patient

*This is
where we
realized
that we had
out “goal”
all wrong*

We really wanted to have patients “show up”.. Not just predict “no shows”

Nudge

Nudge is an application of social norm theory based on behavioral economics.

By informing patients that their no-show rate was higher than the overall clinic **we hypothesized that these patients would respond to improved appointment attendance**.

*We created a
Four Tiered
(cohort)
intervention
aimed at
reducing no
show rate to
12%*

*Four Cohorts each randomly split into control and
intervention groups*

- Cohort 1: n= 116*
 - High Risk Return Visit Patients based on JMP Analysis
- Cohort 2: n= 2,819
 - Patients with 1 No Show in current year
- Cohort 3: n= 843
 - Patients with 2 No Shows in current year
- Cohort 4: n= 527
 - Patients with 3 or more No Shows in current year

***Using the knowledge that past performance is most
predictive, patients are going to be separated into cohorts
based on past no show numbers***

1A	1B	1C
		Control
2A	2B	2C
		Control
		
3A		3B
 +  		Control

Cohort 1A: (1 missed appointment in previous year)

Received only social norm “behavioral economics” crafted letter at beginning of study.

Cohort 1B: (1 missed appointment in previous year)

Received only social norm “behavioral economics” crafted text message 5 days prior to appointment.

Cohort 2A: (2 missed appointments in previous year)

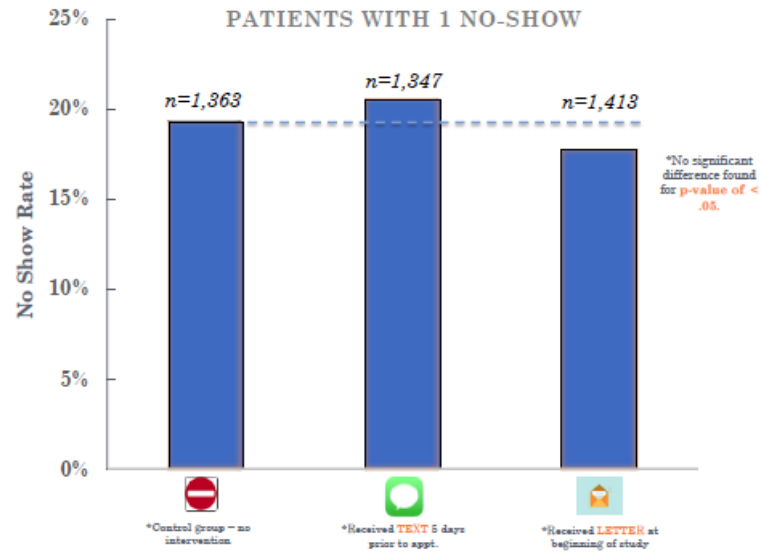

Received crafted letter at beginning of study + crafted text message 5 days prior to appointment.

Cohort 2B: (2 missed appointments in previous year)

Received crafted letter at beginning of study + personal staff phone call 5 days prior to appointment.

Cohort 3A: (3+ missed appointments in previous year)

Received crafted letter at beginning of study + personal staff phone call 5 days prior to appointment + crafted text message 1 day prior to appointment.

Cohort 1A:

Non-significant decrease of 8.3% in no-show rate.

Cohort 1B:

Non-significant increase of 6.5% in no-show rate.

Cohort 2A:

Non-significant decrease of 21% in no-show rate.

Cohort 2B:

Statistically significant decrease of 33% in no-show rate.

Cohort 3A:

Statistically significant decrease of 26% in no-show rate.

*Future
Directions
for better no
show
Prediction*

- Possible Interventions:
 - Phone call from staff person proven to be better
 - Text message is cheaper and less invasive
 - Letter
 - Group Meeting
 - Allow re-book of appointments when you call patients
 - Require patients to be active in appointment by calling a week in advance to “confirm” tentative slot
 - Advanced access schedule
 - Increase clinic accessibility
 - UberHealth
- 

Lesson Learned?

Beginning .. Middle .. End

*The Middle is the exciting
part .. developing the
model and seeing
predictive improvements*

But perhaps the other two pieces are what makes us or breaks us ...

Beginning .. understanding what the customer wants ... probing to know the true goal which might not be conveyed because the client is thinking “analytics”

End .. Being willing to see the “aha” moment that this is not really “success” for the customer and being willing and able to see that and respond
